Program Manager II · Microsoft 365 CXP Engineering

Technical PM. Automation-first. Endlessly curious.

Redmond, WA

// about me

The short version

Lena Khalidi
Builder-minded PM

 Redmond, WA

 B.S. Computer Science, 2022

 At Microsoft since Aug 2022

 English & Arabic

I'm a program manager with a computer science degree and a builder's instinct - **meaning I'm just as comfortable in sprint planning as in the flow editor developing the automation.**

On my team I've become the go-to person for all things automation - the one engineers, partners, and leadership come to when an idea needs to move from "wouldn't it be great if" to something running in production.

Off the clock

Yoga

Baking

Crocheting

Traveling

```
>_ // let's get into it
```

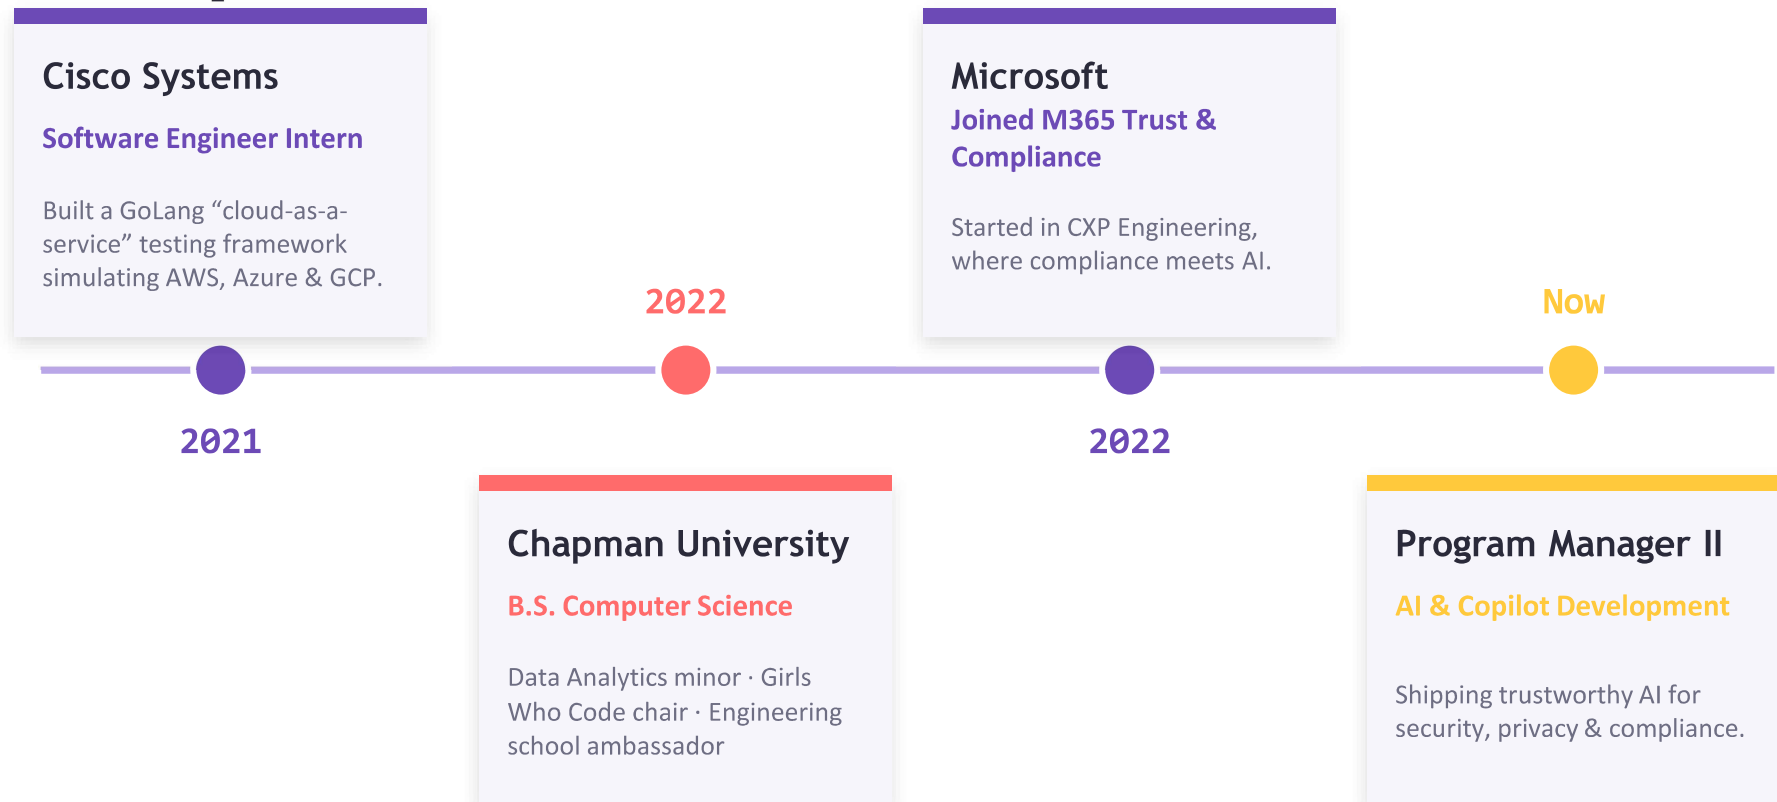

From first “Hello World” to shipping AI in production.

```
$ run career.exe
```

A quick walk through how I got here, how I work, and what I've built.

// education → career

The path so far

// how i work

My operating style

A technical PM who speaks engineering

My CS background means I know what's in scope vs. out, can read a timeline without asking, and have real trust with my eng partners.

Systems thinking at scale

I start by understanding work flows across the team. Then I can identify where technology can create leverage and drive automation strategies that improve productivity, reduce manual work, and scale impact.

A connector across teams

Engineering, Responsible AI, legal, privacy & security teams,- I keep everyone moving toward the same launch.

Fluent across the modern stack

Power Automate, Azure DevOps, Dataverse, Fabric, Copilot Studio, Github - I learn what I need to in order to ship.

// impact

By the numbers

3

AI solutions shipped
production -> concept

including both customer-facing
and internal-facing processes

1,500+

inquiries resolved

in month one - earning
Enterprise Agent designation

25%

less manual analysis

via an AI case-trend
orchestration pipeline

~ 30%

of low-complexity
work

deflected from field teams to
self-service

All figures reflect shipped work on M365 Trust & Compliance experiences.

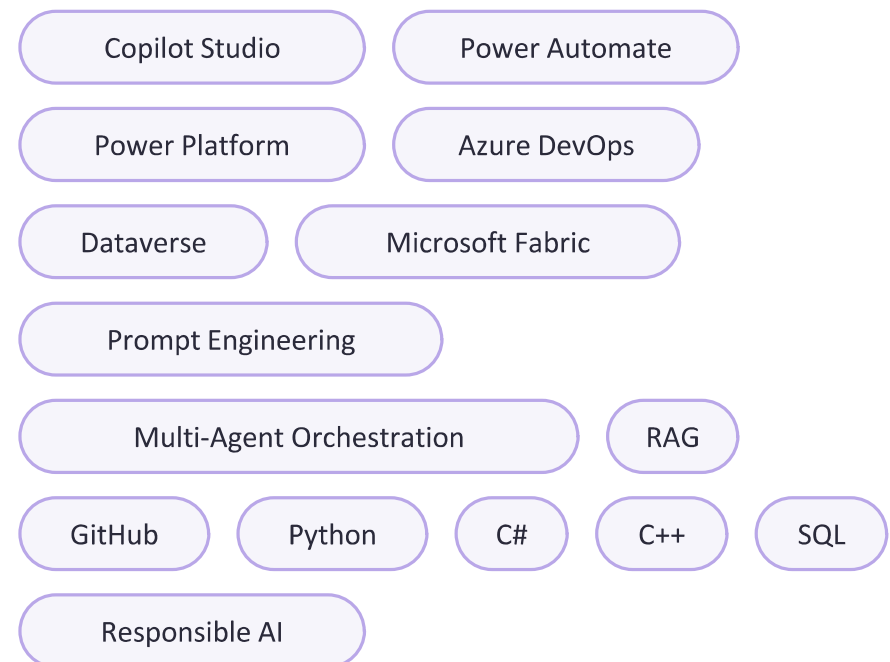

// what i do well

Strengths & toolkit

Where I add the most

- Turning fuzzy ideas into shipped, durable solutions
- End-to-end vision & process automation
- Customer- & data-driven decision making
- Cross-functional collaboration & stakeholder engagement
- Translating legal & leadership guidance into clear guardrails

My toolkit

// projects • 01

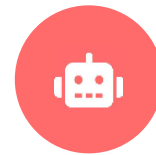

Building AI agents

CUSTOMER-FACING

Service Trust Portal Agent

Owned end-to-end delivery of a compliance agent on Microsoft's public Service Trust Portal - from limited availability to Public Preview. Authored the go/no-go to leadership and drove coordination across engineering, Responsible AI, privacy, security & legal.

INTERNAL

Trust Assistant

Delivered a RAG-powered self-service assistant grounded in curated compliance, security & privacy material - letting field teams resolve high-volume regulatory questions without manual escalation. 1,500+ inquiries resolved in month one; designated an Enterprise Agent.

// projects • 02

Automation & orchestration

FLAGSHIP

Customer Insights Automation

A Power Automate pipeline that runs a monthly case-trend analysis - grouping customer themes, surfacing patterns, and generating an executive summary with suggested actions. It auto-opens an Azure DevOps user story each cycle, creates linked tasks, and notifies stakeholders, all captured in a Dataverse repository for auditability and trend tracking.

Hours of manual analysis → a repeatable engine feeding the backlog.

// spotted an overlap

Agent-to-Agent Integration

Saw that two compliance & risk agents overlapped, so I proposed a single entry-point with unified built-in escalation & feedback paths and pulled in the right engineers and stakeholders together to make it real.

// in their words

What people I work with say

“

She demonstrates resilience in high difficulty, navigating complex integration challenges and stakeholder alignment.

— Former Manager

“

You have a strong instinct for when something needs broader awareness or explicit sign-off, and you don't hesitate to step in to make sure we're doing things the right way. Your partnership has been critical in helping us navigate sensitive launches and compliance-driven work with confidence.

— Engineering Partner

“

You're also really strong at connecting the dots across teams and creating opportunities for collaboration. Bringing in partners to explore integrating their agent into [internal only] was a great example of that. It expanded the scope of what we could deliver and showed a real awareness of how to scale impact beyond a single workstream.

— Data Science Partner

// direct feedback I have received

> thanks for walking through my work

Let's build something.
